

8. By regulating private utility systems in conformance with public utility treatment standards.
 9. By developing standards and criteria designed to meet state and federal requirements.
 10. By encouraging experimentation and research in new disposal techniques and treatment systems.
 11. By encouraging the cooperation of governmental agencies at the local, state and federal level in the development and implementation of an effective regional water pollution control program.
- B. TO ESTABLISH PRIORITIES FOR THE PROVISION OF UTILITIES AND THEIR FUTURE EXTENSIONS.
1. By relating major public projects to anticipated utility expansion programs.
 2. By simultaneously developing both water and sewer facilities in areas of new growth.
- C. TO PROVIDE A COORDINATED SYSTEM OF PUBLIC UTILITIES AND SERVICES IN APPROPRIATE LOCATIONS BASED UPON SERVICE AREA NEEDS AND DEVELOPMENT PRIORITIES.
1. By establishing short-range and long-range utility plans which can be modified and expanded to meet the county's requirements.
 2. By encouraging the planning of public utility systems on a regional or areawide basis.
 3. By discouraging the planning and construction of small utility systems which are uneconomical or duplicative.
 4. By encouraging county land development patterns which will permit the economical extension of public utilities.
 5. By encouraging new growth and development within existing utility service areas wherever possible before extending new lines or creating new districts.
 6. By discouraging the over extension and development of utility systems above and beyond expected development and population growth.
 7. By coordinating the efforts of public and private development programs with county and regional utility planning and programming.
 8. By encouraging the use of state and federal assistance programs for the planning, programming, and construction of utility systems.
